

### Rest easy, we have you covered

If there was only one type of gutter, and every application had similar trees, leaves and pollen, then we'd only need one kind of gutter guard. But 30 years in the gutter guard design and manufacturing business have shown us there are a lot of variables—in leaf and debris loads, in rain, snow and ice loads, as well as subtle variations in gutter designs.

Midwest Enterprises has engineered and re-engineered our gutter guard designs until they really did become the hardest working in the business. There is no other rain gutter protection designed like E-Z Gutter Guards. Subtle tweaks to the leading edges mean higher performance under heavy rain and wind. Engineered-in channels and bends add strength, help water drop through faster, and help keep the guards tightly in place, doing their jobs day and night, through the toughest of environments.

### Knowledge, Experience, Family

Midwest Enterprises is a family-run business, centrally located in Missouri, with the knowledge and experience to produce high quality, common sense products that are both easily installed and profitable. Gutter installers nationwide have recognized this for over 30 years. Our business remains successful because of our commitment to provide quality and service to all our customers, both large and small.

With over 20 years in gutter installation, we started designing and manufacturing E-Z-Lock® gutter guards in 1983. Our products are designed from the installer's viewpoint for E-Z installation. By the 1990's Midwest Enterprises had a dozen patents for gutter protection. We started our own Powder Coat line in 2000, and expanded with a second line in 2010. We use a proprietary powder that has been designed for maximum durability and to be the best coated gutter screen product in the U.S.A.

The knowledge acquired over these three decades helps put Midwest Enterprises at the top of their field, and with distribution in all 50 states, well-positioned for continued growth for years to come.

### Heavy leaf loads. Pine needles and pollen. Heavy rain storms. E-Z has a hardworking gutter guard for that.

- Multiple price levels: pick the level of protection that fits your gutter, debris, or budget.
- Multiple levels of metals: powder-coated aluminum or steel, mill-finish or painted aluminum.
- Multiple levels of mesh screens – from medium to micro-mesh
- Multiple levels of solid covers – true solids to patented reverse louvers

POWDER-COATED STEEL SCREENS

PREMIUM ALUMINUM SCREENS

PAINTED PREMIUM COVERS

Rainwater rushing off a roof with no gutters or clogged gutters will create a constant barrage of rainwater that can damage your home and landscape.

- Water that overflows clogged rain gutters can erode the soil outside the foundation and under your slab, causing a shift in the weight of your home.
- The rain runoff and the soil erosion can ruin your plants and shrubs, and all the extra water can actually rot roots and cause harmful mold and fungus to develop.

## THE HARDEST WORKING GUARDS IN THE BUSINESS

## E-Z GUARD PROTECTION FOR EVERY TYPE OF GUTTER AND DEBRIS LOAD

## INNOVATIVE DESIGNS FOR EVERY TYPE OF GUTTER AND DEBRIS LOAD

### Gutter Guard Lengths

All E-Z-Gutter Guards come in 4-foot lengths except E-Z-SMOOTH FLOW and E-Z-DUAL FLOW, which are 6-foot.

### Gutter Guard Widths

Our gutters come in a 5 and 6 inch widths. Other widths available by special order.

### Gutter Guard Care

Like all gutter protection products, depending on your debris type and load, E-Z-Gutter Guards will require maintenance from time to time, by brushing off the top of the panels.

## POWDER COATED STEEL SCREENS

**E-Z-H/R DELUXE®**

Spring tension design holds this gutter screen in place. Snaps in and out of half round gutters for easy cleaning. The steel is .028 and stands tough under a full load of wet leaves without collapsing. Installs with a slope toward the front to help debris slide off.

- Medium to heavy debris loads with small-sized holes
- Locks into seamless half round gutters with hidden hangers
- Low profile front
- Small-hole design keeps 99% of the debris out of the gutter
- Available only in 6.5" Width, to fit 6" half round gutters
- Center bead for added strength; forces rainwater to drop into the middle of the gutter
- .028 powder-coated expanded galvanized steel
- Available in black & copper

### E-Z to Install:

Locks into half round gutter, without disturbing the shingles — snaps in and out for easy cleaning.

**E-Z-STEP DOWN®**

This design works for every gutter installation, with spring tension that holds it in place, while closing the void under the shingles so debris can't collect there. It is one of the few guard systems available today that snaps in and out for easy cleaning. The steel is .028 — to stand tough under a full load of wet leaves without collapsing — and installs with a slope toward the front to help debris slide off.

Designed with three 90° "steps" at the front for greater strength, and to snap into gutter hem — helping to force water to track into the gutter, and to reduce the effects of water-streaks and tiger-stripping across the gutter.

- Medium to heavy debris loads with small-sized holes
- Stepped-down front for strength, angle in the back with spring-tension action for installation without disturbing the shingles
- .028 powder-coated expanded galvanized steel
- Small-hole design keeps 99% of the debris out of the gutter
- Available in black

### E-Z to Install:

Locks into gutter without disturbing the shingles—snaps in / out for easy cleaning.

**E-Z-LOCK® SMALL HOLE**

Spring tension holds this versatile powder-coated steel gutter guard in place — for quick and easy removal without disturbing the shingles.

- Medium debris loads with small-sized holes
- .028 powder-coated expanded galvanized steel
- Available in black

### E-Z to Install:

Locks into gutter without disturbing the shingles—snaps in and out for easy cleaning. If installing back edge under shingles, we recommend E-Z Under.

**E-Z-LOCK® REGULAR**

This powder-coated steel gutter screen is one of the most versatile, with two different methods of installation.

It can be snapped into the front of the gutter for quick and easy removal without disturbing the shingles, or installed under the shingles and fastened with screws to the front of the gutter.

- Medium debris load
- .028 Powder-coated expanded galvanized steel
- Available in black & copper

### Two Ways to E-Z Install:

1. Locks into gutter—snaps in and out for easy cleaning.
2. Screws to front of gutter — a more permanent method.

**E-Z-UNDER®**

This is the strongest line of screen on the market today. This simple profile is made of powder-coated steel with small-sized holes and stands up great under heavy debris and snow loads.

The screen with its reverse bend is fastened to the front of the gutter with screws, and installs under the shingles for a very strong system.

- Medium to heavy debris loads with small-sized holes
- Fits under shingles and fastens with screws to gutter front
- Also used for spike and ferrule systems and shop-made half round gutter
- .028 Powder-coated expanded galvanized steel
- Available in black & copper

### E-Z to Install:

Screws onto gutter, installs between shingles. Also fastens to front bead of shop-made half round gutter.

## PREMIUM ALUMINUM SCREENS

**E-Z-MICRO MESH®**

This micro-mesh powder-coated aluminum screen is great for extreme environments and coastal applications that can cause some competitive products to corrode, and keeps out even the smallest debris.

Designed with three 90° "steps" at the front for greater strength, this guard snaps into the gutter hem, helping to force water to track into the gutter, while reducing the effects of water-streaks and tiger-stripping across the gutter. The center beads also add strength, while helping keep water from surface tensioning across the screen. The angled back edge holds tight by locking into hidden gutter hangers.

- Heaviest debris loads with the smallest possible holes
- Powder-coated micro-mesh aluminum
- Locks into seamless half round gutters with hidden hangers
- Low profile front
- Does not disturb shingles
- Available only in 6.5" Width, to fit 6" half round gutter
- Center bead for added strength; forces rainwater to drop into the middle of the gutter
- Available in black

- Heaviest debris loads with the smallest possible holes
- Locks into hidden hangers and does not disturb shingles
- Powder-coated micro-mesh aluminum
- Two center beads for added strength
- Available in black

### E-Z to Install:

Locks into the gutter—snaps in and out for easy cleaning.

**E-Z-DROP IN®**

Our entry-level mill-finish aluminum has a solid aluminum front edge that is micro-crippled for a strong product that will not come apart. It works well in light debris loads.

- Light debris load with medium-sized holes
- Screws into gutter front, slides under first row of shingles
- Mill-finish aluminum

### E-Z to Install:

Screws to front of the gutter — a more permanent method.

**E-Z-H/R SUPERIOR®**

This micro-mesh powder-coated aluminum screen is great for extreme environments and keeps out the smallest debris. This guard locks into half round gutter, forcing water to track into the gutter. The angled back edge holds tight by locking into hidden gutter hangers.

- Heaviest debris loads with the smallest possible holes
- Powder-coated micro-mesh aluminum
- Locks into seamless half round gutters with hidden hangers
- Low profile front
- Does not disturb shingles
- Available only in 6.5" Width, to fit 6" half round gutter
- Center bead for added strength; forces rainwater to drop into the middle of the gutter
- Available in black

### E-Z to Install:

Locks into 6" seamless half round gutters without disturbing the shingles—snaps in and out for easy cleaning.

**E-Z-SPEED SCREEN®**

It has a solid aluminum front edge and a strengthening solid strip at the rear and installs with a spring tension to hold it in place. This light-duty mill-finish aluminum guard works well in light debris loads.

- Light debris load with medium-sized holes
- Speed screen snaps into the gutter and does not disturb the shingles
- Mill-finish aluminum

### E-Z to Install:

Locks into gutter — snaps in and out for easy cleaning.

## PAINTED ALUMINUM COVERS

**E-Z-HYDRO CLEAN™**

A solid gutter protection system, that uses our patented multiple front radius curves for our lowest profile. It just snaps into the gutter with our exclusive positive lock system that uses no fasteners and doesn't disturb the shingles.

This solid guard allows the water to track around the front curve (by surface tension) and into the gutter through slots. There are also pre-cut miters, with diverters, for inside and outside corners, plus pre-made endcaps.

- Maximum debris load
- Patented multiple-radius front curves
- Heavy-duty .027 aluminum
- Does not disturb shingles
- Positive lock system snaps in and out of gutter for easy maintenance
- For 5", 6" and 7" gutters with hidden hangers
- Accessories available
- Professionally-stamped endcaps to keep animals and pests out of gutters
- Pre-cut 4" long inside and outside miters
- Available in white, black, royal brown musket brown, clay, terra bronze, colonial gray & copper
- Special order colors available

### E-Z to Install:

Fastens with special stainless steel clips and screws to the front of the gutter.

**E-Z-SOLID®**

This solid guard allows the water to track around the front (by surface tension) and into the gutter, while forcing debris to fly off. The clips install first and maintain a consistent gap along the leading edge, so water tracks around the patented-design multiple radius curve and into the gutter. It also features a perforated bend line where the metal meets the roof. We also supply diverters for use in valleys.

- Maximum debris load
- Solid painted .019 aluminum with a patented multiple radius front curve
- No holes
- An ultra-low 3/4" tall profile guard that fits between the starter and 1st row of shingles without re-hanging the gutter
- Available in white, black, royal brown, musket brown, clay, terra bronze, colonial gray & copper
- Special order colors available

### E-Z to Install:

It just snaps into the gutter, snaps out for easy cleaning, uses no fasteners and doesn't disturb the shingles when installed.

**E-Z-LEAF PROTECTION®**

This cover installs between the shingles and fastens to the top front edge of the gutter with stainless-steel screws (provided).

This guard, when installed, is very strong for maximum debris load, and, combined with our exclusive recessed louvers, assists debris to sweep over the front. The front drip edge helps eliminate water streaks and tiger striping.

- Maximum debris load, including pine needles and oak pollen
- Designed for hangers with the built-in screws
- Built-in drip edge reduces water streaks and tiger striping
- Heaviest water load
- Perforated painted .019" Aluminum with 7 rows of patented recessed louvers
- Installs into shingles
- Available in white, clay, royal brown, black & copper

### E-Z to Install:

Screws to the front of the gutter— a more permanent method.

**E-Z-SOLID®**

This solid guard allows the water to track around the front (by surface tension) and into the gutter, while forcing debris to fly off. The clips install first and maintain a consistent gap along the leading edge, so water tracks around the patented-design multiple radius curve and into the gutter. It also features a perforated bend line where the metal meets the roof. We also supply diverters for use in valleys.

- Maximum debris load
- Solid painted .019 aluminum with a patented multiple radius front curve
- No holes
- An ultra-low 3/4" tall profile guard that fits between the starter and 1st row of shingles without re-hanging the gutter
- Available in white, black, royal brown, musket brown, clay, terra bronze, colonial gray & copper
- Special order colors available

### E-Z to Install:

Fastens with special stainless steel clips and screws to the front of the gutter.

**E-Z-SLIDE®**

This cover works with all gutter systems, and installs between shingles, fastening into the top front of the gutter with stainless zip screws (provided). It features 6 rows of our patented reverse-louvers, and bends to conform to the pitch of the roof and the fall of the gutter. Water drops into the gutter and debris slides over the front of the gutter.

- Medium debris load
- A perforated cover that "slides" between the starter and 1st row of shingles
- Perforated painted .019" aluminum with 6 rows of patented reverse louvers
- Works well with spikes and ferrules
- Available in white, clay, royal brown & black

### E-Z to Install:

Screws to the front of the gutter— a more permanent method.

**E-Z-LEAF SWEEP®**

This heavy-duty cover rests on the back of the hidden hanger (even the screw-type hangers) and fastens to the top front edge of the gutter with stainless-steel screws (provided).

This guard is elevated toward the front, and, combined with our exclusive recessed louvers, assists debris to sweep over the front. The front drip edge helps eliminate water streaks and tiger striping.

- Maximum debris load, including pine needles and oak pollen
- Designed for heavy duty hangers with the built-in screws
- Heaviest water load
- Built-in drip edge reduces water streaks and tiger-stripping
- Perforated painted .019" aluminum with 7 rows of patented recessed louvers
- Does not disturb shingles
- Available in white, clay, royal brown, black & copper

### E-Z to Install:

Screws to the front of the gutter — a more permanent method.

**E-Z-H/R ARMOR®**

This heavy-duty louvered cover is the only one that locks into 6" half round gutter with hidden hangers. With the special front 90 degree bends, these panels install with spring tension.

- Maximum debris load
- The only louvered cover for seamless half-round gutters that installs with spring tension
- Perforated painted .019" aluminum with 6 rows of patented reverse louvers
- Locks into seamless half round gutters with hidden hangers
- Low profile front
- Available only in 6.5" wide, to fit 6" half round gutter
- Available in black & copper

### E-Z to Install:

Locks into 6" seamless half round hangers without disturbing the shingles—snaps in and out for easy cleaning.

**E-Z-MASTER FLOW®**

This effective and simple-to-install aluminum gutter guard has our highest level of engineering to date — with perforations and an arched rear, this recessed cover works with both types of hangers. The arched rear assists debris forward and water downward through the perforated holes.

- Maximum debris load
- Snaps into the gutter — no fasteners needed
- Notched for overlap
- Heaviest water load
- Arched rear helps water flow downward
- Solid perforated painted .019" aluminum
- Does not disturb shingles
- Available in white, mill finish & black

### E-Z to Install:

Lay E-Z-Master Flow in the gutter, push the cover towards the rear until the front snaps under the gutter hem.

**E-Z-DUAL FLOW®**

This effective and simple-to-install aluminum gutter guard recesses into the gutter and fastens to the front with stainless steel screws (provided). With thousands of holes, the rain water passes through the canals, making it E-Z for air flow to dry the debris and blow it away.

With an elevated rear, E-Z Dual Flow® slopes to the recessed front, for use with screw type hangers.

- Maximum debris load
- Fastens to the front with screws
- Heaviest water load
- Canals allow E-Z air flow, letting debris dry and blow away
- Solid perforated painted .019" aluminum
- Does not disturb shingles
- Available in white, mill finish & black

### E-Z to Install:

Lay E-Z-Dual Flow in gutter and screw to front hem of gutter.

**E-Z-SMOOTH FLOW®**

This effective and simple-to-install aluminum gutter guard recesses into the gutter and fastens to the front with stainless steel screws (provided). With thousands of holes, the rain water passes through the canals, making it E-Z for air flow to dry the debris and blow it away.

- Maximum debris load
- Fastens to the front with screws
- Heaviest water load
- Canals allow e-z air flow, letting debris dry and blow away
- Solid perforated painted .019 aluminum
- Does not disturb shingles
- Available in white, mill finish, & black

### E-Z to Install:

Lay E-Z-Smooth Flow in gutter and screw to front hem of gutter.
