

PREMIUM STAINLESS STEEL MESH

INNOVATIVE DESIGNS FOR EVERY TYPE OF GUTTER AND DEBRIS LOAD

E-Z-LEAF ELIMINATOR STAINLESS STEEL TOUGH – PREMIUM GUTTER FILTER

The filter is a tightly woven heavy gauge mesh that is corrosion resistant with significant water infiltration. Created with aluminum edges and bead locks that firmly lock it to the mesh, the patent pending horizontal beads and vertical ribs add strength with a flex-point that self-adjusts to various roof pitches.

Water from the roof easily flows through our uniquely designed water separator and debris lifter, diverting the rain water through the mesh while forcing the debris up and over the front edge of the gutter. The unique reverse arch utilizes a smooth radius bend profile that is positioned below the front gutter hem so there is no additional bending required during installation.

FEATURES:

- A:** E-Z-Leaf Eliminator slides under the shingles for easy installation.
- B:** Tightly woven heavy gauge stainless steel mesh that is a corrosion resistant gutter filter.
- C:** Aluminum edges that are firmly attached to the mesh with a continuous bead lock.
- D:** Patent pending vertical ribs and horizontal beads allow the mesh to adjust to the roof pitch.
- E:** Patent Pending Water Separator / Debris Lifter forces rainwater from the roof through the screen into the gutter.
- F:** Reverse Arch: This unique patent pending design utilizes a smooth radius bends that curve allowing water to flow through and debris to lift up and over the front of the gutter. When installed, the arch is designed to be in-line with the slope of the roof!
- G:** Supplied with stainless steel screws.

* Complies with the ASNI 63-2013 standard for rainwater harvesting because the mesh size is 700 microns, less than the required 1500 microns.

SIZE: Comes in 4-foot lengths and 5", 6" / 7" widths.

Like all gutter protection products, depending on your debris type and load, E-Z-Leaf Eliminator will require maintenance from time to time, by brushing off the top of the panels.
